HARSH SHARMA

ENTRY-LEVEL DATA ANALYST

Vadodara, Gujarat | +91 6352532739 | harshsharmag99@gmail.com
linkedin.com/in/harshxo44 | github.com/Harshxo44 | Portfolio: codewithaesthetic.vercel.app

PROFESSIONAL SUMMARY

Final-year B.Tech Computer Science and Engineering student (2027) with project experience in Python-based data cleaning, exploratory data analysis, statistical analysis, and visualization. Analyzed 22,699 NYC Yellow Taxi trip records in the Google Advanced Data Analytics capstone, identifying a strong correlation (0.95+) between trip distance and fare amount. Seeking an entry-level Data Analyst role.

TECHNICAL SKILLS

Data Analysis: Python (Pandas, NumPy, SciPy), Exploratory Data Analysis, Data Cleaning & Preprocessing, Statistical Analysis, Feature Engineering
Visualization: Matplotlib, Seaborn
Databases & Querying: SQL (MySQL), PostgreSQL, MongoDB, Firebase Firestore
ML Foundations: Machine Learning, TensorFlow, PySpark
Tools: Jupyter Notebook, Google Colab, Git, GitHub
Languages: Python, Java, C++, JavaScript

PROJECTS

NYC TLC Taxi Fare Data Analysis — Google Advanced Data Analytics Capstone | *Python, Pandas, NumPy, Seaborn, Matplotlib, Jupyter Notebook*

- Cleaned and explored 22,699 NYC Yellow Taxi trip records, including data preprocessing, datetime standardization, and anomaly flagging.
- Performed statistical and correlation analysis; the project report found a strong positive correlation (0.95+) between trip distance and fare amount.
- Created distribution plots and correlation heatmaps, then summarized findings and fare-estimation recommendations in a written report.

Velora — Vehicle Telemetry & Diagnostics Platform (Prototype) | *Java, Spring Boot, PostgreSQL, REST APIs*
github.com/Harshxo44/Velora

- Built backend services that ingest and store vehicle telemetry (speed, RPM, coolant temperature, throttle, fuel level, battery voltage, trouble codes) and serve latest and recent readings per vehicle and trip.
- Implemented diagnostic trouble code lookup, vehicle health summaries, and rule-based threshold checks for critical coolant-temperature and battery-voltage conditions.
- Planned next phase: predictive-maintenance and driver-behaviour analysis on collected telemetry using feature engineering and anomaly detection, with experiments to run in Google Colab.

EXPERIENCE

AI/ML Intern (Virtual) — CodSoft | July 2026

- Developed a Random Forest model to predict bank customer churn using the Kaggle Churn Modelling dataset.
- Built a classifier to detect fraudulent credit card transactions using the Kaggle fraud-detection dataset with separate training and test files.
- Classified movie genres from plot summaries using TF-IDF features and Logistic Regression on the IMDb genre dataset.

EDUCATION

B.Tech in Computer Science and Engineering | Parul University, Vadodara | 2023–2027

CERTIFICATIONS

- Google Advanced Data Analytics Professional Certificate
- IBM AI Engineering Professional Certificate
